

Technical data sheet

Title	Cable clip
Standard	DIN 741

1.- Purpose and field of application.

Cable clips are accessories for forming cable loops, terminals and joints. They are made up of a strut, a body and two nuts. Made of carbon steel with an electrolytic zinc plating or of stainless steel .

This item is used in all types of cable joints, ties, cable terminals and in temporary connections.

Its use consists of running the cable through the space between the strut and the body and tightening the nuts. This accessory will be chosen depending on the diameter of the cable to be used.

2- Product dimensions and code.
