

Technical data sheet

Title	Tensioner
Standard	DIN 1480

1.- Purpose and field of application.

Cable tensioner made up of a ring and a hook, made from forged steel with an electrolytic steel plating or of stainless steel.

One of the elements will be threaded on the left and the other on the right. The tensioners will have the metric marked and an “L” if it turns to the left.

The accessory will provide tension by rotating the body of the tensioner until the desired tension is reached.

The tensioners will be chosen according to the eyelet diameter and the load that they have to bear. It is always advisable for the tensioner to work in a straight line or under traction to ensure correct operation.

2- Product dimensions and WLL loads
